

HOW TO BLOCK IP OR MAC ADDR ON UBUNTU ROUTER WITH IPTABLES

1. add this rules (ip or mac depends on your network).

For IP : `iptables -I FORWARD -s 192.168.1.7 -j DROP`

For MAC : `iptables -I FORWARD -m mac --mac-source 44:8A:5B:8D:43:3A -j DROP`

2. for permanent, add this rules on `/etc/rc.local`.

```
root@proxyLJG: /home/ljg
GNU nano 2.2.6                               File: /etc/rc.local                               Modified
#!/bin/sh -e
#
# rc.local
#
# This script is executed at the end of each multiuser runlevel.
# Make sure that the script will "exit 0" on success or any other
# value on error.
#
# In order to enable or disable this script just change the execution
# bits.
#
# By default this script does nothing.

iptables -t nat -A POSTROUTING -s 192.168.1.0/24 -o eth0 -j MASQUERADE
iptables -t nat -A PREROUTING -s 192.168.1.0/24 -p tcp --dport 80 -j REDIRECT --to-ports 3128

#blok mac atau ip tertentu
iptables -I FORWARD -s 192.168.1.7 -j DROP
iptables -I FORWARD -m mac --mac-source 44:8A:5B:8D:43:3A -j DROP

exit 0
